DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 8 are rejected because it is unclear what is meant by "substantially amorphous". It is unclear if the active material alloy is amorphous or not. This makes the claim vague and indefinite.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4, 6, 8-10, 12, 15, 17-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishimura et al. (JP 2001-006682, translation).

Nishimura et al. teaches in [007] a negative electrode comprising a silicon active material and a binder that forms a nongraphitizing carbon by heat-treatment on a charge collector and sinters it under a non-oxidizing atmosphere. Nishimura et al. teaches in [008] that the binder becomes an amorphous carbon with few volume changes. Nishimura et al. teaches in [0013] that the silicon used for this invention is a

crystalline substance and amorphous. Nishimura et al. teaches in [0024-0025] that stainless steel or copper can be used for the charge collector.
